Google Gemini Getting Started — Requirement Document

1. Document overview

This document specifies the requirements, prerequisites, and operational scope for a user getting started with Google Gemini. It establishes baseline rules for interface interaction, account personalization, privacy-conscious chat sessions, prompt refinement, and Google Workspace connections.

2. Objective and purpose

Purpose statement: Enable users to transition from standard search bars to interactive personal AI by establishing personalized context rules, privacy-preserving chat sessions, query-refining skills, and Google Workspace integrations.

Primary tasks

1. Authenticate and identify the active account and available features.
2. Apply and test persistent persona and formatting instructions.
3. Distinguish normal history-retained chats from temporary chats where the feature is available.
4. Edit or resubmit prompts to test response variability and constraints.
5. If available and authorized, summarize Gmail messages and generate a reply draft.

3. Scope

In scope

• Set profile context to: “I'm a small business owner. I use an Android phone and a Windows laptop.”

• Set response style to: “Give me concise answers using bullet points. Keep examples practical and business-relevant.”

• Create, access, and delete normal chats; investigate temporary chats.

• Edit/resubmit test prompts.

• Use Gmail integration for summaries and drafts, if enabled.

Out of scope

• Custom Gems.

• Deep Research.

• Canvas/advanced document builders.

• Third-party API connections such as Slack, Notion, or custom developer environments.

• Sending email messages during testing.

4. Input and output specifications

Custom instructions

• **About you:** I'm a small business owner. I use an Android phone and a Windows laptop.

• **Response style:** Give me concise answers using bullet points. Keep examples practical and business-relevant.

• **Additional preference:** Avoid Apple-specific environments unless requested.

Test prompts

• **TC-101:** What can you help me with today?

• **TC-102:** How can I improve my customer response time?

• **TC-103:** Give me 3 tips for better sleep.

• **TC-104, original:** Explain how solar panels work.

• **TC-104, revision 1:** Explain how solar panels work in exactly 3 sentences.

• **TC-104, revision 2:** Explain how solar panels work using an analogy a 10-year-old would understand.

• **TC-105, summary:** Summarise the last 3 emails in my Gmail inbox using @Gmail.

• **TC-105, draft:** Draft a polite, professional reply to the most recent email.

Output requirements

• Clean Markdown formatting in documentation.

• Concise bullet points for general assistance.

• Practical business-relevant examples.

• No unsolicited Apple-specific examples.

• Gmail summaries should include subject, sender, and high-level summary, and must match actual emails.

• Drafts should reflect the relevant sender and message context; review before sending.

5. System configuration and quality requirements

• Use a supported, up-to-date browser and a Google account.

• Gmail integration requires supported account features and authorization.

• Never fabricate email subjects, senders, or message contents.

• Feature availability may vary by account, interface, region, or administrator settings.

• Record unavailable features as blocked rather than falsely passing them.

6. Deliverables

1. Screen-recorded project walkthrough.

2. Public GitHub repository containing `custom_instructions.txt`, `concept_guide.md`, `requirement_document.md`, `implementation_plan.md`, `testing_plan.md`, and `README.md`.

3. PDF exports of the Concept Guide, Requirement Document, Implementation Plan, and Testing Plan.
