Testing Plan: Welcome to Google Gemini (Topic 1)

1. Testing Strategy

This document defines the manual testing procedures, test cases, and evaluation criteria used to verify Google Gemini personalization, chat history behavior, inline prompt editing, and Google Workspace integration.

The testing covers four core areas:

1. **Format and Persona Compliance:** Verify that Gemini follows the configured custom instructions and provides concise, practical, business-relevant answers.
2. **Chat History and Privacy:** Verify that standard conversations appear in chat history and check whether Temporary Chat is available. Temporary Chat privacy behavior cannot be verified if the feature is unavailable.
3. **Prompt Refinement:** Verify that editing and resubmitting a prompt updates the response to meet sentence-count and audience requirements.
4. **Google Workspace Integration:** Verify Gmail summaries against actual email content and check the accuracy and relevance of generated reply drafts.

2. Manual Test Cases

TC-101: Account and Plan Verification

Test Category: Account and Plan Verification

Input Prompt:
"What can you help me with today?"

Expected Result:

- Gemini provides a general overview of its capabilities.
- The account interface and available subscription information can be inspected.
- The background color alone is not treated as definitive proof of the subscription tier.

Actual Result:
Gemini provided a business-relevant overview of its capabilities, including assistance with email, coding, workflows, and problem-solving.

Status: PASS

Evidence: Screenshot of the initial Gemini response.

Note: Record the subscription tier separately if it has been verified through account or subscription information.

TC-102: Custom Instructions Verification

Test Category: Format and Persona Compliance

Input Prompt:
"How can I improve my customer response time?"

Expected Result:

- Gemini provides clear, practical recommendations.
- The response uses headings and bullet points consistent with the configured preferences.
- Suggestions are relevant to a small business.
- Recommendations avoid irrelevant Apple-specific software advice.

Actual Result:
Gemini recommended automated acknowledgements, quick-reply templates, centralized communication channels, website chatbots, and request prioritization. The response used headings and bullet points and provided practical business examples.

Status: PASS

Evidence: Screenshot of Gemini's customer response time recommendations.

TC-103: Standard Chat History and Temporary Chat

Test Category: Chat History and Privacy

Input Prompt:
"Give me 3 tips for better sleep."

Expected Result:

- In a standard chat, the conversation appears in the saved chat history.
- If Temporary Chat is available, its behavior can be tested separately according to the available interface and product guidance.

Actual Result:
Gemini returned exactly three practical sleep tips covering a consistent sleep schedule, a suitable sleep environment, and a wind-down routine. The standard conversation appeared in chat history.

The Temporary Chat option was not visible in the inspected Settings or New Chat interface. Its history and privacy behavior could not be tested.

Standard Chat History Status: PASS

Temporary Chat Status: BLOCKED

Reason: Temporary Chat was not visible in the current account interface.

Evidence: Screenshot of the standard chat history and the inspected Gemini interface.

Privacy Limitation: The absence of a conversation from the visible sidebar would not, by itself, prove that no backend logs or metadata exist.

TC-104: Inline Prompt Editing and Constraint Test

Test Category: Prompt Refinement

Test Prompts:

1. "Explain how solar panels work."
2. "Explain how solar panels work in exactly 3 sentences."
3. "Explain how solar panels work using an analogy a 10-year-old would understand."

Expected Result:

- The original prompt produces a clear explanation.
- The first edited prompt produces exactly three sentences.
- The second edited prompt produces a simple explanation suitable for a 10-year-old.
- The original prompt can be edited and resubmitted.

Actual Result:
The original solar-panel prompt was edited and resubmitted twice. The first revised response contained exactly three sentences. The second revised response explained solar panels using a game-of-catch and tennis-ball analogy to describe sunlight, photons, electrons, and electricity.

Output Constraint Status: PASS

Inline Edit Workflow Status: PASS

Overall Status: PASS

Evidence: Screenshots of the original prompt, Edit workflow, three-sentence response, and child-friendly response.

TC-105: Google Workspace and Gmail Extension

Test Category: Workspace Extension Integrity

Test Prompts:

1. "Summarise the last 3 emails in my Gmail inbox using @Gmail."
2. "Draft a polite, professional reply to the most recent email."

Expected Result:

- Gemini summarizes the three latest emails accurately.
- The summaries reflect the actual email content.
- The generated draft has the correct recipient and subject.
- The reply is relevant, polite, and professional.
- The draft remains unsent.

Actual Result:
The summaries of the three latest emails were checked against the actual Gmail inbox and verified. Gemini generated a reply draft. The recipient, subject, relevance, and professional tone were all checked and passed. The email was not sent.

Summary Status: PASS

Reply Draft Status: PASS

Overall Status: PASS

Evidence: Screenshots of the verified summaries and generated reply draft, with private email information hidden.

3. Evaluation Checklist

3.1 Formatting and Personalization

- Custom instructions configured.
- Customer response time answer uses clear headings and bullet points.
- Recommendations are practical and business-relevant.
- No irrelevant Apple-specific advice appeared in the tested response.

3.2 Chat History and Privacy

- Standard conversation appears in saved chat history.
- Temporary Chat history behavior verified.
- Temporary Chat limitation documented honestly.

3.3 Prompt Refinement

- Original solar-panel prompt tested.
- Three-sentence constraint verified.
- Child-friendly analogy verified.
- Original prompt edited and resubmitted using the Edit option.

3.4 Google Workspace Integration

- Three Gmail summaries checked against the actual inbox.
- Reply recipient verified.
- Reply subject verified.
- Reply relevance verified.
- Professional tone verified.
- Draft left unsent.

4. Final Test Summary

Test	Result
TC-101: Account and initial capability response	PASS for capability response; plan tier requires separate verification if needed
TC-102: Custom instructions	PASS
TC-103: Standard chat history	PASS
TC-103: Temporary Chat	BLOCKED
TC-104: Inline prompt refinement	PASS

TC-105: Gmail summaries and reply draft	PASS

5. Conclusion

The tested Gemini configuration successfully followed the intended response preferences, produced the required prompt refinements, and retrieved and summarized Gmail content accurately in the tested scenarios. The generated email reply draft also passed the recipient, subject, relevance, and tone checks.

The Temporary Chat test remains blocked because the option was not visible in the inspected interface. Its privacy and history behavior therefore remain unverified.

The results reflect the observed tests and should not be interpreted as proof of every Gemini feature or of backend data-retention behavior.
